

Peugeot 405

There are two keys, one for the ignition and one for the doors, this is because the ignition lock was changed a few years ago.

The car takes DIESEL fuel only

Things to be aware of :

It is getting old and things will stop working so please be nice to it.

Known issues:

1. Never leave the keys in the ignition or anywhere in the car as it can lock itself automatically when the doors are shut
2. The fan for the heater does not work, though sometimes it might for a short while.
3. The boot lid may not always stay open. Make sure you open it as fully as possible and use the long cardboard tube to prop it open by balancing it on a rear light cluster.
4. The fuel gauge does not work properly. Please refer to the trip meter and reset it whenever you fill up. Please fill up when you do a long journey, otherwise fill up if you notice the trip meter is registering more than 200 miles. If in doubt, please fill up anyway and reset the trip meter.
5. The passenger-side windscreen wiper can stop working. If this happens while you are driving, stop the wipers straight way and pull over. Make sure the wiper is back at its off position, you may now continue using just the driver side wiper, providing you feel it is safe to drive. Please report the problem to Bob, Andrew or Orysia on your return so that we can get it fixed.
